HTML Product Scraping to CSV (Offline Demo)

PROJECT EVIDENCE REPORT | PERSONAL DEMONSTRATION | SYNTHETIC DATA

Important disclosure: This work is a personal reproducible sample, not a paid client project. Data is fictional and metrics describe only the bundled sample run.

Verified sample output

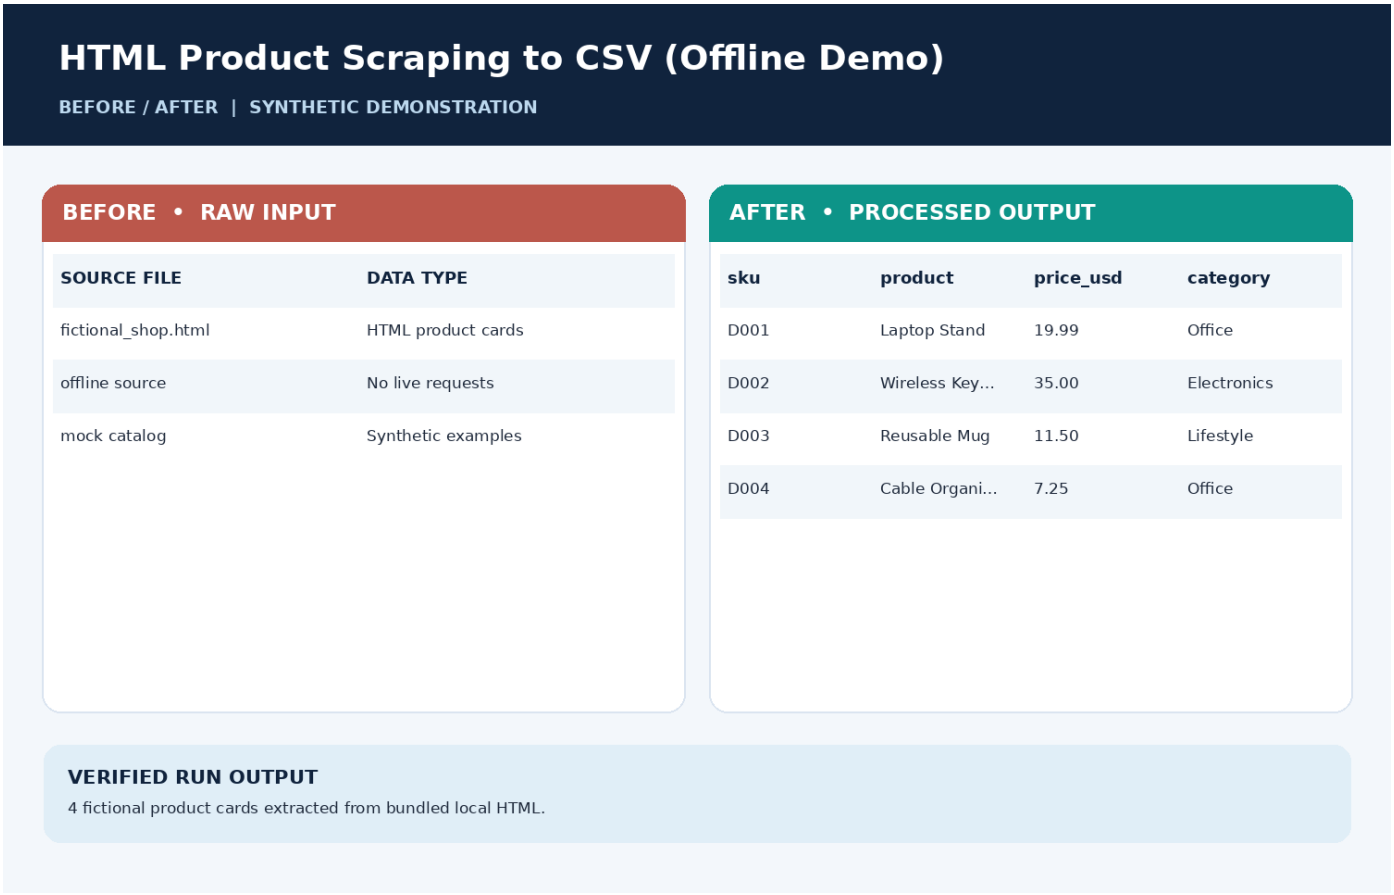

4 fictional product cards extracted from bundled local HTML.

Method: Execute `python process.py` inside the project folder. Outputs are saved in the `output/` directory.

Data-quality scope: Demonstration uses an offline fictional HTML page; no third-party site scraped

Deliverables: Four-row CSV export

Repository name: python-web-scraping-demo

The screenshot above is generated from the actual sample input and output files, not captured from a client environment.
